Weekly Update: 06

Reporting Period: 21.07.2025 –28.07.2025

1. Introduction

This week, we expanded both admin and user-facing features. Major updates include product management, enhanced sales and booking tracking, invoice handling and personalized recommendations.

2. Work Completed

A. Add & Sell Products

Admins can add new products by category (Bike, Scooter, Helmet, Engine Oil) using 'addproduct.php'. Product info is inserted into both a shared product table and its specific category table. Sales are handled in 'soldproducts.php', which updates stock, removes bookings, and links to invoice viewing.

B. View Products & Customers

- vwproducts.php shows all products, sorted by category through SQL views (e.g., vwbike, vwhelmet).
- customers.php displays all registered users with their name, email, and contact information.

C. View Booked & Sold Products

- booked.php lists current bookings with related customer and product data.

- sold.php shows the full sales history, including buyer info and transaction dates.

D. Print & View Invoices

- printinvoice.php allows admins to search sold products by name, email, product ID, or date.
- view_invoice.php generates a printable invoice with buyer info, product details, and total cost. A print button is included, and invalid queries show an error.

E. Recommendation System

We implemented a personalized recommendation engine. User interactions (view/book) are tracked and processed by a Python script (recommendations.py), which suggests up to four similar products based on price range and brand. The suggestions are shown on a dedicated frontend page (recommend.php).

3. Conclusion

This week, we completed major functional features: product management, user recommendations, and invoice support. The system is now more dynamic, personalized, admin and user friendly.
