Supervisor: Dr. Mohammad Shifat-E-Rabbi [MSRb]

Weekly Update: 03

Reporting Period: 30.06.2025 –07.07.2025

1. Introduction

This week, we focused on developing the Sidebar, Cart, and Search features of the Bike Store Management System.

2. Work Completed

A. Sidebar

The sidebar was created to help users filter products quickly. It includes:

- Category: All kinds of available products in the shop, i.e., bikes, scooters, engine oil, helmets.
- Brands: List of available brands.
- Price Range: Users can filter products based on price.

B. Cart

A cart system was added to show booking details. When a user books a product, the cart shows:

- Product name and brand
- Booking time and date
- Quantity or selection info

- Cancel booking option.

There will be more updates in the next week

C. Search

A search bar was built to help users find products by typing any word. For example, searching “A” will show all products that have “A” in their brand, product name, or product type. PHP was used to match results, and CSS styled the results nicely.

3. Conclusion:

This week, we added important features to make the website easier to use. The sidebar helps users filter products. The cart shows booking details clearly. The search option works well and shows matching products.
